ATP tennis players data analysis

Antonio García Naranjo
Date: 13/05/2020

We trained a model using data from ATP tournaments from 2018. The goal was to predict results in the same tournaments in 2019. The model predicted correctly almost 70% of the matches that were played. As we see in the picture, in ATP Masters 1000 Shanghai, it predicted correctly more than 90% of the matches.
